What you can do with SQL Server Machine Learning Services

In this interesting lecture, we've talked about SQL Server Machine Learning Services.

SQL Server Machine Learning Services, is a feature in SQL Server, that was originally shipped in SQL Server 2016 as "R Services" and later rebranded in SQL Server 2017 as "Machine Learning Services" with support for Python and R.

SQL Server 2019 Machine Learning Services, support executing Python, R and Java scripts, via SQL Server.

Among other, with SQL Server Machine Learning Services, you can perform the below Data Science-related types of operations:

- Classification/Categorization
- Regression/Predict continuous values
- Anomaly Detection
- Recommendations

SQL Server Machine Learning Services, support both Windows and Linux, therefore they are cross-platform, just like SQL Server.
